About the Authors

Jawad Faiz, Ph.D., is a Distinguished Professor and the Director of the Center of Excellence on Applied Electromagnetic Systems in the School of Electrical and Computer Engineering at the University of Tehran, Iran, where his research interests are the design, modeling, and fault diagnosis of electrical machines and transformers. He has authored three books published by Springer, IET, and IEEE-Wiley. He has authored/co-authored top 1% most highly cited papers worldwide in his research field and more than 350 articles in international journals and presented more than 340 papers in international conferences. He was a keynote speaker at different international conferences. He is a fellow of IEEE, a fellow of the Iranian Academy of Sciences, and a fellow of the Euro-Med Academy of Arts and Sciences. He was a recipient of many national awards, including 1st prize for fundamental research from the International Kharazmi Festival, Distinguished Professor of the National Foundation of Iranian Elite, Excellent Badge of Knowledge, and the University of Tehran Excellent Research Award. He was also a recipient of the international award of the Silver Einstein Medal for academic research from UNESCO.

Ehsan Mazaheri-Tehrani received the B.Sc. degree from Isfahan University of Technology, Isfahan, Iran, in 2013, and the M.Sc. degree from the University of Tehran, Tehran, Iran, in 2017, both in electrical engineering. He is currently pursuing a Ph.D. degree in electrical engineering at the University of Tehran. He has over five years of industry experience in data science and machine learning, focusing on real-world applications in energy systems. His research interests include modeling, control, and fault diagnosis of electric machines, with an emphasis on predictive maintenance and data-driven diagnostics, as well as the application of machine learning techniques in power engineering and distributed energy resources.

Bashir-Mahdi Ebrahimi, Ph.D., is a globally recognized leader in electric machines and electrified propulsion, with over 15 years of pioneering contributions across aerospace, automotive, and energy sectors. He has authored more than 100 widely cited peer-reviewed publications in top-tier journals and premier international conferences. He is an inventor or co-inventor of over 10 patents in advanced motor topologies, thermal management, and fault-tolerant propulsion architectures. His work has earned multiple international awards for breakthrough innovation and technical excellence in electrical engineering. He has led the development of state-of-the-art electric propulsion systems, achieving record-breaking power density and efficiency for eVTOL, EV, and defense applications. His expertise spans electromagnetic design, multi-physics modeling, advanced cooling, condition monitoring, and system-level optimization of PM and induction machines.
